The Journal of Economic History

The First Century and a Quarter of American Coal Industry. By Howard N. Eavenson.
Pittsburgh: Howard N. Eavenson, 1942. Pp. xiv, 701.

For fully a century coal has been basic in American industrial growth. The mining of coal is one of the oldest and most important branches of heavy industry. Its development has been closely linked with the rise of powerful monopolies as well as with some of the worst excesses of competition that this country has known. Coal mining bears the unfortunate distinction of being the first and, in many respects, the most difficult problem child of American industry, presenting during the past half century a record of chaos and decline that can hardly be matched in other areas of the industrial scene. Yet for all its importance, the American coal industry has been not only neglected but almost ignored by our economic historians. A work that makes a substantial contribution to this field is welcome indeed.

Mr. Eavenson's study is less a history (in the current academic use of the term) than a compendium of information concerning the coal industry. It bears closer resemblance to Taylor's *Statistics of Coal* than to Nel's *Rise of the British Coal Industry*. It has been written by a distinguished mining engineer with a lifetime of experience in the bituminous industry, who has for some years devoted much time to extensive and careful research in the history of

Broad subject areas for inclusion are computational methods in linear algebra, optimization, ordinary and partial differential equations, approximation theory, stochastic analysis and nonlinear dynamical systems, as well as the application of computational techniques in science and engineering and the mathematical theory underlying numerical methods.
